SSL LIVE Patronaat Stage1 v6.1 (ENG)

Main Hall has the same setup for FOH and Monitors. 2x the following:

_ **1x L200 (mixingdesk)**
_ **2x SB32.24 (I/O box, together analog 64in - 32out, AES/EBU 8in - 8out)**
_ **1x computer with Solsa (SSL Offline Setup Application); at the monitorposition**
we have a tablet, so it's possible to connect and control the desk wireless.
The FOH-position has an extra bracket for a laptop.

The Desk and I/O boxes are connected with a Dante system. Because off that all
SSL equipment work on a samplerate of 48 kHz.

So both desks have their own I/O boxes (2x SB32.24), totally separate control
of the in- and outputs.
The SB32.24's (4x) are offstage. Patching to these SB32.24's is possible with the
Onstage Patchbox, in which the FOH and Monitor SB32.24's are represented.
_ **64x Onstage Input, paralel to FOH and Monitors**
_ **20x Onstage Output from FOH**
_ **32x Onstage Output from Monitors**
_ **8x In, 8x Out AES/EBU from FOH**
_ **8x In, 8x Out AES/EBU from Monitors**
_ **4x ethernet socket (Dante)**
_ **2x ethernet socket (TIE Line FOH)**
_ **2x BNC (TIE Line FOH, Madi)**
_**12x XLR Male/Female (TIE Line FOH)**

For both positions there are Base Showfiles ("PAT...BASE").
When a Showfile is selected, you can find configuration-information at the bottom
of the screen. It gives usefull information of the setup.

_NOTES
We tried to prepare all common connections in the "PAT...BASE" Showfiles.

If you want to prepare a Showfile in Solsa, make sure you choose L200!

It is possible to configure the L200 the way you want to. (Menu>Setup>
Console Configuration). Whatch the blue usage bars at the top of the screen.

You can make several Scenes within a Showfile. Setup changes affect
all Scenes within the Showfiles! For instance, making a stereochannel,
happens in all Scenes, at that spot.
We think it is helpfull to build the desk in a chronological order.

Solsa (SSL Offline Setup Application) is available at the SSL website.
                    solidstatelogic.com
It's a heavy program, which gives some problems on a light computer (Windows).
TO IMPORT A FILE YOU HAVE TO USE A STICK, JUST AS THE REAL DESK.
